

High Performance Data Integration

ETISolution 6.0.4

Versata over-delivers a second time in 2009!

The significant release of 6.0.3 caused many of our customers to be shocked and impressed at how much ETI / Versata was able to add to ETISolution® since the Versata acquisition. 6.0.3 contained 3x – 4x the number of enhancements over any prior ETI release in the past 2 - 3 years.

Continuing to take customer input seriously, we are very pleased to announce the availability of 6.0.4!

Our April release of ETISolution 6.0.4 includes more enhancements than any releases made in 2007 and 2008. Again, our focus was to fix bugs or “irritations” based on customer input, as well as make solid improvements to the overall usability. We are very happy about 6.0.4 and strongly suggest that those who have not yet upgraded to at least 6.0.3, consider upgrading soon.

6.0.4 includes enhancements for:

- Better management of virtual parts
- Improved techniques for managing search text criteria when doing a “Find in Context” function
- Better handling of copying modules across Template Libraries
- Improved error messages
- Ability to add notes to Conversions and Mapping specifications
- Improvements in how object trees in packages are displayed when expanded or collapsed plus much more.

We will be providing more details, such as release notes, URLs to download, etc. shortly, but want to remind all ETI customers of the most important fact:

ETISolution LIVES! ETISolution is now THRIVING!

VIRTUAL USER CONFERENCES: Your Input is Imperative to Our Mutual Success

Many customers participate in our product input and feedback process, called Virtual User Conferences, and see first-hand how quickly the new ETI turns around requested enhancements. Some customers remain skeptical... Some may ask, 'Who is Versata?' and 'Is ETISolution going to continue to be improved and developed the way it used to be?'

We ask you to look at the facts. A **HUGE** development team comprised of hundreds of people now backs ETI. We are now two significant releases into our "post-acquisition" life. Things are **GOOD**.

LET US KNOW WHAT YOU WANT in the tool by participating in the VUC's and **TELL US** how we can help you expand into new projects within your organization. Most users are running core & enterprise applications and data warehouses off of ETISolution, and ETISolution has served you very well for 1, 2 or 10 years! With Versata's resources and commitment, not only should ETISolution be able to serve your ETL and EAI needs even better for many years to come, but think about where else ETISolution can be used in your organizations.

For many integration and ETL challenges, ETISolution continues to be the most solid, and fastest ETL tool on the market. Plus, with our pricing model (where you do NOT pay more to put ETI code on more servers), our overall licensing and maintenance cost continues to be about 20% to 30% on average of what Informatica, IBM, and other enterprise tools cost.

We want your feedback. Look for ways for us to work together to help you expand the use of ETISolution and drive down your ETL costs!

To give us your feedback or set up a phone call, please e-mail:
